

NetIX provides support for EDI in a versatile environment

EDI in a Cloud Environment

NetIX for EDI provides a truly unified, On-Demand, B2B integration server built on a single platform environment for businesses that are looking to enable supply chain efficiencies. Our single community gateway helps businesses meet all, everyday EDI requirements, integrating business processes, whilst automating and streamlining trading partner relationships.

All of the necessary components your company needs, tools, technology, platform and access to NetEDI's expertise are all provided to your company, eliminating the need for company-owned hardware and software. Building your Business-to-Business relationships is no longer a constraint on time and resources, NetIX will change the way you use EDI.

NetIX's hosted EDI translation allows you to process your Orders, Invoices, Despatch Advices whilst providing seamless integration with your internal accounting software or ERP system. NetIX provides the benefit of processing your EDI data locally while maintaining the advantages of complete visibility and redundancy offered through the hosted EDI solution.

Various File formats can be handled by the powerful NetIX translator. The versatile NetIX adapters are able to handle virtually any structured file format including the native format of your ERP or back-office accounting system.

A Versatile Solution to fit Businesses of every size. NetIX offers three different 'flavours' based upon your Business size and requirement.

- **NetIX Lite** is ready to handle common supply chain transactions for modern Small to Medium Sized Enterprises with a simple to-use document turn-around solution.
- **NetIX Professional** for businesses interested in integrating EDI with their ERP or back-office accounting system. Easy to use and cost effective, NetIX Pro is ideal for SME's looking to consolidate their B2B strategy.
- **NetIX Collaborator** for large enterprises. Enabling supply chain visibility, businesses benefit by capturing their B2B data into a common format accessible by their supplier community.

Benefits of NetIX

EDI Software as a service available at a fast turnaround

No investment needed for hardware

Easy to use

Integrate with almost any Back-office accounting software

No Maintenance issues

The details are abstracted, no need for Technical Knowledge

Expert Assistance

In addition to a hosted infrastructure, your company also has access to a trained team of experts that are focused in on your needs to provide you with an excellent response and deal with any of your customer's needs.

We can assist in a whole variety of matters. Should any problems arise with your partners, there will be someone on hand for helping to quickly and effectively address these issues.

Everything in One Place

The seamless collaboration between NetIX and the NEGrid VAN provides complete control and visibility of your EDI traffic. The NetIX solution provides you with a unique and comprehensive overview for the full end-to-end transaction flow.

Providing Business Intelligence, NetIX uses the cloud as a platform for monitoring the flow of your EDI traffic without having to go through additional systems to extract the information.

Total ERP Integration

Imagine empowering a user with the ability to transact their EDI business directly within their ERP system. With the launch of Agile ERP these features are now available. Setup new EDI customers, create new interconnects all within the comfort of your ERP system.

Integration Adapters

All NetIX integration adapters are designed to be easy-to-use. The adapter enables businesses to exchange business information such as sales orders and invoices directly in and out of your back-office system. To take advantage of this service, simply download the adapter from NetIX. Once the adapter is installed, your EDI documents are seamlessly integrated into your back-office system, bridging the gap between disparate systems.

The NetIX Cloud computing solution allows small to medium sized companies to utilize and leverage technologies that were traditionally inaccessible by helping to cut costs, add expertise and remove complexity. Avoid capital expenditure on new hardware, software and other peripheral services when you only pay for what you use.

By eliminating these operating costs while receiving strategic services through a pay as you go model, your company is cutting costs without sacrificing the quality of your service.

In addition, by utilising the internet and a browser, you can access the NetIX application and all of your data anytime, any place. This offers great versatility and affords more flexible working patterns.

NetIX is ideal for companies that:

- Don't want to rely on IT personnel for keeping their EDI software and hardware up-to-date
- Are looking to integrate EDI with their internal ERP system
- Would like mobility in their EDI solution. You can access the service wherever you have an internet connection.
- Are looking for a simple interface that gives full control over all your EDI data and network traffic.
