LTC Healthcare cut costs by implementing PEPPOL

LTC Healthcare have been a leading provider of contraception and safe sex aids since 1993 and are trusted by the NHS to provide the highest quality products.

The Department of Health has decided that all NHS Trusts and suppliers must comply with the PEPPOL standard of messaging. After talking to another PEPPOL provider for a while, LTC realised that they didn't have the capability to deliver the solution they needed and that's when NetEDI stepped in to help.

Connect easily with the PEPPOL network

Cloud-based and easy-to-use

Fully managed with 24/7 support

As well as safeguarding their ability to trade with the NHS, suppliers are also set to see other benefits as a result of replacing their paper-based system with a tailor-made electronic one instead.

Since LTC Healthcare implemented their new PEPPOL system, they have seen a reduction in

the cost and time it takes to handle data, so that valuable staff time can now be directed elsewhere.

PEPPOL has also improved their purchase to pay timescales so it's easier and faster for them to get paid, once an order has been received.

"We found the testing and set up process to be straightforward and easy to get through. NetEDI explained everything clearly and were happy to answer any questions we had."

Simon Greenwood, UK Senior Sales Manager, LTC Healthcare

LTC continue to trade with NHS Supply Chain with NetEDI's help

Simon says, "The NHS are one of our biggest customers, so we wanted to keep trading with them. We decided to choose NetEDI, as they were the solution provider for NHS Supply Chain and were capable of delivering the service we needed."

At NetEDI, we're always striving to provide a service that fits with the specific business needs of each client, while keeping future growth in mind. We implemented our NeTIX Starter solution for LTC Healthcare which allows them to exchange Credit Notes, Delivery Notes, Invoices, Orders, and Order Responses, all in a PEPPOL compliant way.

In the future, LTC have plans to upgrade to our NeTIX Professional service, which will integrate directly with their accounting system and make the process of exchanging documents even more automatic.

Simon comments, "The fact that we could upgrade to an integrated service played a part in our decision to choose NetEDI. We knew we were getting value for money and safeguarding our ability to save even more time and money in the future."
